

CYCLONE ENGINEERING PROJECTS

WHERE SAFETY CULTURE
IS NOT A POLICY.
IT IS WHO WE ARE.

ISO 45001

Zero Harm. No Exceptions.

Our occupational health & safety management system ensures every worker goes home safe, every shift, every site.

ISO 9001

Quality Is Not Optional.

Our quality management system ensures that every process, every inspection, and every report meets the highest standards.

OUR CULTURE

People Before Process.

Standards give us the framework. Our people give it meaning. We build environments where speaking up is expected and respected.

THIS MONTH'S FOCUS

On a Tailings Storage Facility, the gap between a safe dam and a failing one is rarely dramatic; it is the seepage nobody reports, the reading that was skipped, the concern that felt too small to raise. **Our culture is what closes that gap.**

We operate facilities that communities trust with their safety. That trust is earned on every shift by every member of our team.

01

SEE IT

Every site walkabout is a formal act of risk management. Your eyes are our first line of defence.

02

SAY IT

No concern is too small. At Cyclone Engineering Projects, speaking up is an act of professionalism, not a complaint.

03

REPORT IT

Observations only protect people when they are recorded. Data is our institutional memory.

OUR STANDARD

See it. Say it. Report it. Every shift. Every site. Every time.
